*Light* is important. Give as much strong light as possible without burning leaves, otherwise colors will not be bright.

*Temperature* should be 80 to 85 degrees, the higher the better. Reduce heat gradually to harden off plants. Start the bulbs in flats and place on steam flows if possible.

*Water* sparingly until sprouts and roots are 4 to 6 inches long, then shift to 5 or 6 inch pots. Never allow the pots to dry out when in full growth.

- Priscilla Ann** (Yoder) (New Hybrid). Early crimson, trace of yellow on lips. . . . . 3.50

**Special Note**—Seed should be sown late June or July for Winter flowering in Northern States. Late July or early August in Southern States. High temperatures retard germination. Select a cool location for the seed flats where there is good air circulation. Water sparingly but keep moist, until seedlings are well established. We recommend using sterilized soil and it should not be fertilized. Dust seeds with Proliferol or Hormo-Root before sowing.

### CALCEOLARIA

Approximately 10,000 S to 1/64 oz.

Calceolaria do not like direct sun but a light, airy place and temperature around 50 degrees.

For Easter flowering in a 6-inch pot, sow seeds June-July. To finish in 5-inch sow about August 15. For 4-inch sow about September.

In our experience we have found either of the 2 mixtures below to be the best for florists requirements. The Multiflora Nana make especially nice pot plants in 4's for Easter sales.

## "CULTURAL HINTS" FOR DOUBLES

**Sowing Dates**—For pots, November for 5's, and December for 4's for late April and May; for combinations, December and January for 2 1/2's and 3's for April and May; for bedding, December and January for April and May sales.

**Germination**—Sterilized peats and leafmolds (if not strongly acid) are good mediums; so are various sterilized mixtures of soil with peat or other organic matter. Don't cover the seed except for perhaps a sheet of paper to keep from drying out. The surface of the flat must be moist till the roots have dug down into the soil. Keep them at 60-65 degs. nights till germination takes place, then 48-50 degs. and dry, but not wilting.

When transplanting a mixed flat, use the smaller seedlings as well as the larger ones, so you will obtain all colors.

If you have a small florist shop or if you are a wholesale florist or nurseryman, you'll appreciate the value of the Hillman machine. This is a machine that anyone can operate, thereby reducing your need of costly skilled labor. Whether you turn out a few wreaths, floral sprays, garlands (roping), grave blankets, etc. . . . or 10's of thousands, the Hillman machine eliminates headaches and hard work . . . increases production and profits.

Here at last is the answer to the problem of meeting heavy demands, during the Christmas season especially, for wreaths and other decorations . . . demands that pile up when there are never enough hours in your day.

#### SIMPLE TO SET UP

Insert your Hillman machine into a table slot (photo 1) . . . or clamp it to the outside of a bench (photo 2). Assembly of the machine is a simple operation by following instruction sheet provided with each machine.

#### SIMPLE TO STORE AWAY

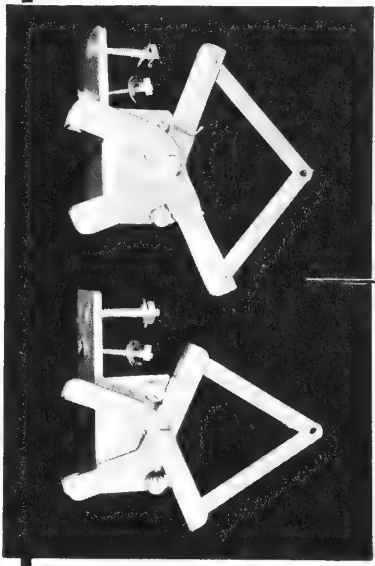

The Hillman Wreather Machine is completely portable. When not in use it may be taken down quickly and easily . . . and may be stored or carried in its specially designed, compact carton. It is never in the way.

## NEW DEVELOPMENTS FOR 1953!

### IMPROVED LINKAGE NOW ON BOTH HILLMAN MODELS

Strong, steel links from foot pedal to jaws on standard Model "A" and heavy-duty Model "B", now give positive, direct-line pressure to assure you smooth operation and lifetime use under normal conditions. Steel links are adjustable to any standard bench height.

**IF YOU NOW OWN A HILLMAN MACHINE . . .**  
 you may have — free of charge — the new steel links to replace the original cable simply by writing for them . . . they'll be sent to you prepaid.

### NEW MODEL "B" FEATURES SUPER-JAWS FOR HEAVY WORK

A new, extra heavy duty machine, Model "B", has been added to the Hillman line. Model "B" is identical in principal to Model "A", but has been designed with larger jaws and heavier construction for heavy duty work and large volume production.

### CONVERT YOUR MODEL "A" to MODEL "B" at LOW COST

If you are using standard Model "A" but wish to do heavier work in larger volume, convert to Model "B" by replacing present jaws with new Model "B" jaws at low cost.

Hillman Weather Rings and Garland Clips\* were the product of long experience in the time consuming, tedious work of hand wrapping and wiring of wreaths, garlands (roping), floral sprays, grave blankets, etc.

The invention of the rings and clips for use with the Hillman machine has opened up new production capacities while reducing cost of operation.

Hillman weather rings are available in various diameters — 8, 10, 12, 14, and 16 inches — with 1½ inch clips for light materials such as lycopodium, and holly, or 2½ inch clips for heavier greens like spruce, balsam, hemlock, etc.

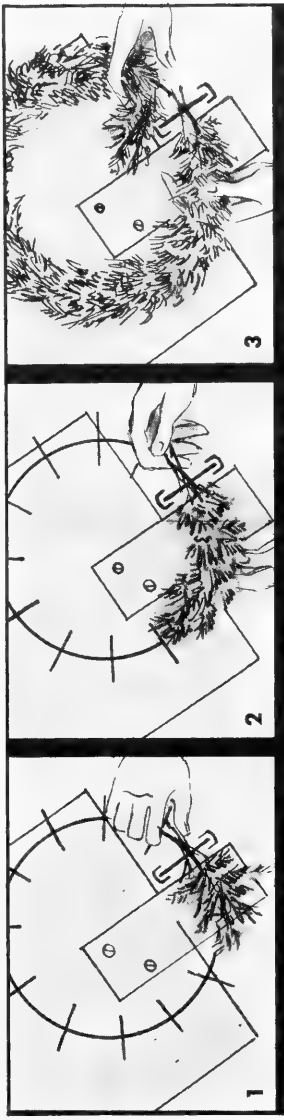

With Hillman's 10-inch rings you can make finished wreaths 16 inches or more in diameter depending on your standard custom . . . Hillman's 12-inch rings are recommended for finished wreaths 20 or more inches in diameter, etc.

Hillman rings (as are floral spray bars, garland clips, etc.) are painted green to blend with materials and to resist rusting or staining of surfaces on which they are hung.

## HERE'S HOW TO MAKE AN 8, 10, 12, 14 OR 16" WREATH!

**STEP 1.** Place ring in machine with clip held between jaws. Put greens in clip with some stems extended into second clip (illustr. 1). Amount of greens used will depend on whether you desire light, medium, or heavy wreaths. Step on foot pedal to close clip.

**STEP 2.** Move ring so that adjacent clip slides into jaws. Place equal amount of greens into second clip on top of ends of first greens (illustr. 2). Press pedal to close clip. Continue process until last clip is reached.

**STEP 3.** To finish wreath, lift first hand full of greens with right hand. Place new greens into last clip with left hand (illustr. 3). Close last clip. Allow first greens to fall into place so that no clips will show on finished wreath.

**NOTE:** Double-face wreaths can be made easily by placing two selected greens face down under Hillman ring, and drawing stems up into clip with one stem on each side of ring. Then place clip into machine and put necessary greens into clip as described in single face operation. Press foot pedal and continue same operation until wreath is done.

## HERE'S HOW TO MAKE EXTRA LARGE WREATHS WITH STANDARD SIZE WREATHS

Special over-sized wreaths may be made easily with great rigidity by using standard Hillman rings. For example, two 10 inch Hillman rings will form a base of 20 inches in diameter, thereby making a finished wreath up to 36 inches or more. Here's how:

**STEP 1.** Cut two Hillman rings of desired diameter, open and place first one under one regular plain ring (available in extra large sizes from your supplier). Illustr. 4.

**STEP 2.** Proceed to make first half of wreath according to instructions for making standard size wreath as shown above. Illustr. 5.

**STEP 3.** When last clip on first half is reached add second opened Hillman ring. Allow end of wire to overlap. Proceed to complete wreath as before. Illustr. 6.

**NOTE:** Occasionally a clip will break off one of the Hillman rings in handling. Be sure to save the clip. It can be used in original position by placing in Hillman machine, putting ring over clip and then greens on top as in normal procedure.

# Floral Sprays

made quickly and firmly

Beautiful, firm floral sprays may now be made faster and better with the use of inexpensive Hillman Floral Spray Bars. Use of the Hillman Weather Machine is optional since the Floral Spray Bars have clips of dead-soft wire which may be locked over flowers and greens by hand. The Hillman Method of making floral sprays eliminates the tedious jobs of . . .

- preparing a base
- picking flowers and greens

Make your floral sprays following these simple steps and complete the spray as you proceed (only those flowers needed for height should be wired).

- STEP 1.** Place desired amount of flowers, ferns and greens in first clip.
- STEP 2.** Close clip by hand or with the Hillman Weather machine.
- STEP 3.** Add flowers and greens in each succeeding clip and close.
- STEP 4.** When last clip is reached, reverse flowers and greens in last clip and close.
- STEP 5.** Place ribbon.

# Grave Blanket Kit

opens profitable new field

Now, Hillman introduces the new Grave Blanket Kit which will let you

- quickly make a blanket of standard size.
- fasten evergreens more securely.
- anchor the blanket to the ground whether lying flat or "mounded".
- rapidly produce blankets that are flexible for ease of handling and delivery in car or truck.

## MAKING GRAVE BLANKETS WITH THE HILLMAN METHOD

**STEP 1.** Attach three cross braces to main clip bars with tie-wires provided so that completed form looks like illustration 7.

**STEP 2.** Attach greens to main clip bars alternating from one side to the other. Start from both ends and work to center. Make sure that only the center stem of each bough is fastened to allow natural spread of branches.

**STEP 3.** Add decorations as desired to finished blanket. See illustration 8. De Luxe Grave Blanket Kit includes extra wire and "hairpins" for additional decorations.

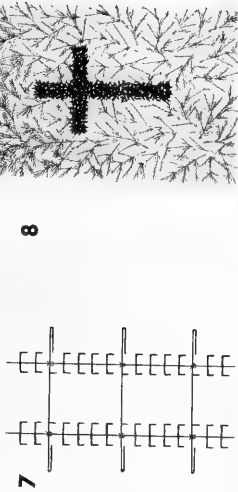

**NOTE:** Do not open anchor "legs" until ready to place blanket on grave.

**DELUXE AND STANDARD KITS AVAILABLE**

**DELUXE KIT** — contains 2 wire clip bars 48" long with soft wire clips for fastening greens; 3 wire braces 24" long (plus 4" fold-over ends on each for anchoring frame in ground.); 2 light 30" wires complete with small clips for decorating blanket with red ruscus, starlice, etc. (These wires may be bent into numerous shapes); 12 HILLMAN "Hairpins" to fasten decoration to blanket.

**STANDARD KIT** — Same as above, less two 30" decorating wires and 12 HILLMAN "Hairpins".

**NOTE:** Special decorations, such as crosses of red ruscus, can be made in advance of your season and added when grave blankets are made.

# Garlands can be made faster with the HILLMAN Garland Clip

Old, time-robbing, inefficient methods of making holiday garlands (roping) can now be eliminated with the use of Hillman Garland Clips. Available in three sizes, Hillman Garland Clips ensure maximum results in making garlands (roping) without using costly skilled labor. Production can easily be doubled.

When ordering Garland Clips be sure to specify size.

1" CLIP FOR LIGHT WEIGHT GARLANDS (lycopodium, cedar, etc.)

1 1/2" CLIP FOR MEDIUM WEIGHT GARLANDS (hemlock, laurel, etc.)

2" CLIP FOR HEAVY WEIGHT GARLANDS (spruce, balsam, and similar heavy materials)

Using the Hillman Wreath Machine to make Garlands follows similar steps in wreath-making:

- STEP 1.** Adjust jaws to size of clip. Set jaws slightly smaller than clip to ensure a snug fit.
- STEP 2.** Place clip in jaws. Surround base (rope or wire) with desired amount of greens and set inside clip. Press foot pedal to lock clip.
- STEP 3.** Set clips from 3 to 5 inches apart depending on evergreens used. Continue above operation until desired length is reached.

Using the Hillman Method in making garlands (roping) requires boughs that are longer than those used in making hand wrapped garlands. For example, use ten to fifteen inch boughs rather than those six to eight inches long.

*There's what  
were say . . .*

Since the HILLMAN METHOD was introduced three years ago, hundreds of letters have been received from nurserymen and florists who have used HILLMAN Wreath Machines to speed up evergreen wreath production, thereby reducing costs and boosting profits. These letters, plus statements from a large group who tested the latest HILLMAN METHODS for making Garlands (Roping), Floral Sprays, and Grave Blankets, offer enthusiastic proof that the HILLMAN METHOD can boost profits for you, too.

"The HILLMAN Garland (Roping) Clips have made the production of thousands of feet of holiday roping a cinch with more money in the register."

"Since my introduction to your clips and wreath-making machine last December, I have been recommending it to all wreath-makers I meet. I just rave about it because it's wonderful to use and a great time saver."

"... easy operation of the HILLMAN machine has permitted us to use unskilled help at great savings in labor cost."

"The HILLMAN Grave Blanket Kit was introduced at the perfect time for us. The increasing demand for Grave Blankets can be met easily and profitably with the use of your method."

"Our HILLMAN Wreath Machines have paid for themselves a hundred times during two Christmas rush seasons."

"I have seen your machine and rings in use by a nearby florist, and was impressed by its simplicity and speed. Please accept my order . . ."

**Make your own test of  
the HILLMAN method!**

# USE Terra-Lite

## FOR SEED GERMINATION

Terra-Lite is no better medium for seed germination than Terra-Lite vermiculite. Look at these advantages:

- **Ideal Moisture Control** — Holds and releases air and water in just the right quantities for healthy root growth.
- **Damping-off Virtually Eliminated** — Terra-Lite is completely sterile.
- **High Air-Water Content Induces a High Rate of Germination.**
- **Less Watering is Required.**
- **Seedlings Can Be Easily and Rapidly Removed From Flats** — with little danger to fine hair root systems.

## FOR ROOTING CUTTINGS

The ideal rooting medium should be one that holds plenty of moisture, yet never excludes air. Terra-Lite has enormous water-holding capacity, but never is so saturated as to choke off the air supply to roots.

- **Terra-Lite Saves Hours of Tedious Bench Work** — You can carry a 4 cu. ft. bag of Terra-Lite in each hand. An equal volume of sand would weigh 800 lbs.
- **Terra-Lite is Sterile, Weed-Free, Germ-Free.**
- **It's Easy to Place Cuttings in Terra-Lite** — No trenching of the material is required.
- **Terra-Lite Holds a Large Volume of Water** — Many type cuttings placed in Terra-Lite require no further watering before transplanting.
